Protocol Version

v2.0.4-SECURE

Ledger Anchor

ACTIVE

I. EVIDENCE DESCRIPTION

External hard drive recovered from a hidden floor compartment in the suspect's home office. Device was disconnected and cold at the time of seizure. USB 3.0 interface shows no signs of physical tampering. Serial Number: WXP1E81L92Z. Secured in a padded anti-static evidence bag. Tamper-evident seal #14402 applied immediately.

II. FORENSIC TOOLS & ENVIRONMENT

- FTK Imager: Used for bit-stream physical imaging and generating the primary E01 file.
- Tableau T8u USB 3.0 Bridge: A hardware Write-Blocker to ensure zero data alteration.
- Autopsy / Sleuth Kit: For keyword searching and carving through unallocated space.

III. ANALYSIS METHODOLOGY

1. Hardware Integrity: Connected the drive via a Tableau Write-Blocker; verified that the "Read-Only" light was active.
2. Physical Imaging: Created a bit-for-bit clone (E01) of the 2TB drive to preserve the original state.
3. Data Carving: Ran automated scripts to recover files from "Unallocated Space" (files that the suspect thought were deleted).
4. Hashing: Verified that the MD5 and SHA-1 hashes of the image matched the drive's initial state.

IV. OBSERVATIONS & LOGS

- Hidden Partitions: Discovered an 80GB hidden encrypted partition (TrueCrypt) labelled "System_Vault".
- Deleted Records: Successfully recovered a deleted spreadsheet titled EXFIL_LOG_2026.xlsx.

V. FINAL DETERMINATION

The forensic image of FC-055S contains the 'Missing Link' for this investigation. The recovered data matches the stolen intellectual property from the victim's server. The presence of hidden partitions suggests an intentional effort by the suspect to conceal the stolen assets. Extraction complete; all digital evidence is hashed and locked to ForenChain.

CONFIDENTIAL

This report is cryptographically hashed and securely anchored within the ForenChain blockchain system. Any unauthorized modification invalidates its integrity and legal admissibility.
