

FORENSIC ANALYSIS REPORT

CASE IDENTIFIER	: CASE-0013	GENERATION DATE	: 27/03/2026, 9:23:20 pm
LEAD ANALYST	: John Doe	PROTOCOL VER.	: v2.0.4-SECURE
CURRENT STATUS	: TRANSFERRED_TO_LAB	LEDGER ANCHOR	: ACTIVE

I. EVIDENCE DESCRIPTION

Amazon Echo Show 10 recovered from the kitchen counter of the suspect's residence. The device was found powered on and connected to the local 'Home_Secure_WiFi' network. To preserve volatile data (recent voice commands and cache), the device was kept powered on using a portable power bank and placed in a Faraday bag. No physical damage noted. MAC Address: 00:A0:C9:14:C8:29. Evidence secured with tamper-evident seal #10223.

II. FORENSIC TOOLS & ENVIRONMENT

- Autopsy (IoT Module): For parsing cloud-synced SQLite databases.
- Wireshark: To capture outgoing traffic to Amazon AWS servers before disconnection.
- CROWD (Cloud Retrieval of Online Web Data): To pull synced Alexa voice history.

III. ANALYSIS METHODOLOGY

1. Network Isolation:
Moved to a controlled network environment to prevent a remote "Factory Reset" command.Đ
2. Cloud Extraction: Used the suspect's authenticated session tokens (recovered from Case 0011's laptop) to legally pull the last 48 hours of voice command logs.Đ
3. Internal Storage:
Performed a logical acquisition of the onboard flash memory.

IV. OBSERVATIONS & LOGS

- Voice Logs: A voice command was recorded on 2026-03-21 at 22:45: "Alexa, how do I wipe a hard drive quickly?" *
- Motion Sensor Data: The Echo Show's built-in camera logged motion in the kitchen at 03:00 AM on the night of the incident, despite the suspect claiming they were asleep.Đ
- Linked Devices: The Echo hub was linked to a hidden smart lock on the back door that was opened at 03:05 AM.

V. FINAL DETERMINATION

The IoT forensics for CASE-0013 successfully places the suspect at the scene during the time of the crime. The voice command history

demonstrates
'premeditated intent' to
destroy digital evidence.
Evidence is verified and
synced to the blockchain.
