Protocol Version

v2.0.4-SECURE

Ledger Anchor

ACTIVE

I. EVIDENCE DESCRIPTION

Physical cryptocurrency hardware wallet recovered from a floor safe during a search warrant execution at the suspect's secondary residence. The device was found alongside a handwritten list of 24 words (Recovery Seed Phrase). The device is powered off. USB-C port inspected for hardware tampering; no physical shimmmg detected. Serial Number: LNX-9928-BB. Secured in a static-shielded evidence bag with tamper-evident seal #11005.

II. FORENSIC TOOLS & ENVIRONMENT

- Chainalysis Reactor: For tracing the movement of funds on the Bitcoin and Ethereum blockchains.
- Ledger Live (Forensic Mode): To verify public addresses associated with the hardware.
- Bitcoin Core Node: For local verification of transaction timestamps on the mainnet.

III. ANALYSIS METHODOLOGY

1. Public Key Extraction: Extracted the Extended Public Key (xPub) to view the entire transaction history without needing the private keys.
2. Blockchain Correlation: Matched the outgoing transactions from this wallet to a reported "phishing attack" that occurred on 2026-01-10.
3. Address Clustering: Identified that the stolen funds were moved through a "Mixer" service before 0.5 BTC was sent to a known exchange account belonging to the suspect.

IV. OBSERVATIONS & LOGS

- Transaction History: The wallet contains a balance of 2.45 BTC and 15.2 ETH.

- Timestamp Match: A transaction for 0.5 BTC occurred exactly 12 minutes after the suspect logged into the Dell Laptop (Case 0011).

- Seed Phrase: The recovered 24-word phrase was confirmed to grant full access to the funds identified in the phishing report.

V. FINAL DETERMINATION

The analysis of FC-2026-021W provides the 'smoking gun' for the financial motive in this case. By tracing the on-chain movement of funds, we have linked the physical hardware found in the suspect's safe to the digital theft reported three months ago. The synchronisation of timestamps between the laptop logs and the blockchain transactions creates an irrefutable link. Case data is anchored to ForenChain for trial.

CONFIDENTIAL

This report is cryptographically hashed and securely anchored within the ForenChain blockchain system. Any unauthorized modification invalidates its integrity and legal admissibility.
