v2.0.4-SECURE

Ledger Anchor
ACTIVE

I. EVIDENCE DESCRIPTION

The DJI Mavic 3 Pro was recovered from a rooftop near a high-security facility following a reported 'No-Fly Zone' breach. The device was found powered off after an apparent emergency landing. The battery (Serial: BT-552) was removed immediately to prevent further logging. An internal 8GB SSD and a 128GB MicroSD card (SanDisk Extreme) were found inserted. Secured in an oversized anti-static evidence bag with tamper-evident seal #12204.

II. FORENSIC TOOLS & ENVIRONMENT

VOT (Visual Online Tool): For decoding proprietary DJI flight DAT files.
Cellebrite Premium: To access the onboard encrypted storage.
Google Earth Pro: To map and visualise the recovered GPS coordinates.

III. ANALYSIS METHODOLOGY

- Physical Inspection: Checked for any modified hardware or "payload" attachments (none found).
- Log Acquisition: Extracted flight controller logs which contain GPS, altitude, and pilot control inputs.
- Media Recovery: Recovered 4K video footage from the MicroSD card, including several "Home Point" locations.

IV. OBSERVATIONS & LOGS

Flight Path: The flight log shows the drone took off from a park exactly 1.2km away from the facility at 22:15 UTC.
Home Point: The "Return to Home" (RTH) coordinate matches the suspect's registered home address found in Case 0011.
Video Evidence: The camera was active and recording during the entire flight, capturing high-resolution images of the facility's security checkpoints.

V. FINAL DETERMINATION

The forensic analysis of FC-2026-030D provides undeniable proof of unauthorised surveillance. The flight path and 'Home Point' metadata create a direct digital link between the drone and the suspect. This data, combined with the video files recovered, supports the charge of 'Espionage' and 'restricted airspace violation'. Metadata and hashes have been committed to the ForenChain block.

invalidates its integrity and legal admissibility.
